

**Conservation and restoration of petrifying spring habitats (code *7220) in Estonia.
Improving the ecological status of the Prästvike lake and the springs at the Vormsi
landscape conservation area. Project LIFE SPRINGDAY**

According to the results of the research, carried through in 2014, there will be worked out a plan for the concrete conservation actions. The following activities will probably take part:

- research of the ecological status of the lake and springs
- geodetical and hydrological measurements and modelling of the hydrological regime
- cartographic work
- removal of the vegetation (bushes), influencing the thermal and luminous conditions of the springs
- restoring the natural hydrological regime of the springs
- cleaning the springs of the sediments and vegetation
- removal of the obstacles from the streams
- improving the ecological status of the Lake Prästvike- removal of the reed and sediments
- access to the project area.
